                                                                                                                                                                                                                                                      -I. FUNCTION: Selectively inhibits insulin-stimulated glucose utilization and glycogen deposition in muscle, while not affecting adipocyte glucose metabolism.
-I. SUBCELLULAR LOCATION: Secreted.
-I. SIMILARITY: Belongs to the calcitonin family.
                                                                                                                                                                                 MEDLINE=93215963; PubMed=8462765; DOI=10.1007/BF00399947; Christmanson L., Betsholtz C., Leckstroem A., Engstroem U., Cortie C., Johnson K.H., Adrian T.E., Westermark P.; "Islet amyloid polypeptide in the rabbit and European hare: studies on its relationship to amyloidogenesis."; Diabetologia 36:183-188(1993).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Albrandt K., Sierzega M.E., Mull E., Brady E.M.G.;
"PCR amplification of amylin 3-34 from genomic DNA.";
"PCR amplification of amylin 3-34 from genomic DNA.";
Submitted (AUG-1996) to the EMBL/Genbank/DDBJ databases.
-!- FUNCTION: Selectively inhibits insulin-stimulated glucose
utilization and glycogen deposition in muscle, while not affecting
adipocyte glucose metabolism.
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

--- FUNCTION: CGRP induces vasodilatation. It dilates a variety of vessels including the coronary, cerebral and systemic vasculature. Its abundance in the CNS also points toward a neurotransmitter or neuromodulator role (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

"PCR amplification of amylin 3-34 from genomic DNA.";
"PCR amplification of amylin 3-34 from genomic DNA.";
Submitted (AUG-1996) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Selectively inhibits insulin-stimulated glucose
utilization and glycogen deposition in muscle, while not affecting
adipocyte glucose metabolism.
-!- SUBCELLULAR LOCATION: Secreted.

Calcitonin gene-related peptide II.
By similarity.
Phenylalanine amide (G-121 provides amide group) (By similarity).
By similarity.
                                                                                                                                                      alpha and beta genes.";

DNA Seq. 12:131-135 (2001).

-!- FUNCTION: CGRP induces vasodilatation. It dilates a variety of vessels including the coronary, cerebral and systemic vasculature. Its abundance in the CNS also points toward a neurotransmitter or neuromodulator role (By similarity).

-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

It dilates a variety of vessels including the coronary, cerebral and systemic vasculature. Its abundance in the CNS also points toward a neurotransmitter or neuromodulator role.

SUBCELLULAR LOCATION: Secreted.
